1. The attached sketch shows the munitions factory at Bodenhagen, which is a former German Army factory. It was built in 1916 and modernized in 1935-37, with half the plant built underground. During the war the factory employed 800 men and women. At present it has 200 Russian employees. The plant produces 8.8 cm., 10.5 cm., and 15 cm. artillery shells, and 150 kg. bombs. German employees under Russian supervision are employed in sorting the ammunition. The material which is discarded as unusable is exploded in the nearby forest, and the usable material is inspected, cleaned, and stored in underground bunkers.
